itrust consulting ISO/IEC 27001 certified

In a business world threatened by cyber-attacks, it is important to have a good management system available to deal with them and to act promptly.

The competence of itrust consulting to build such management systems was recently confirmed by the successful certification of its own information security management system (ISMS).

The following companies in the energy sector will benefit from this security know-how:

[1] Creos Luxembourg S.A., owner and operator of power grids and gas pipelines in Luxembourg, which already relies for quite a while on tools and competences of itrust consulting in the context of information security.

[2] Luxmetering GIE, operator of the National Smart Meter Platform, central data collection and management system, collect and transfer consumption data to the DSO's, which, with the support of itrust consulting, is building up its ISMS and thus planning to fulfil the requirements of the General Data Protection Regulation (GDPR). Furthermore, Luxmetering GIE will implement real-time risk-monitoring with TRICK Cockpit (a tool and a methodology resulting from a research project co-financed by the Luxembourg Ministry of the Economy).

[3] Sudgaz S.A., natural gas supplier and distribution company, which has chosen to establish an integrated management system for both information security and data protection with the help of itrust consulting, again based on the risk assessment tool TRICK Service.

Thus, one of our principles announced on the 10th anniversary celebration of itrust consulting: 'Run a single management system', has already been successfully accomplished on several occasions.

About itrust consulting

itrust consulting, an SME from Luxembourg specialising in Information Security helps its customers from both the public and private sectors to protect their information against any divulgation, manipulation, or unavailability. Its services are related to building, implementing, and auditing Information Security Management Systems, assessing and treating risk with its own TRICK Service tool, deploying security experts whenever needed (SECaaS, or Security as a Service), on request hacking of our customers and handling cybersecurity incidents (malware.lu CERT), or designing and operating security solutions for ICT. These services benefit intensively from co-funded national and European research projects.
